Kursbeschreibung

This 2-day course teaches students how Aruba Central services can improve network visibility, security, and automation. Students will learn how Client Insights gives the network administrator deep knowledge about the devices connected to the network and how they behave. Through the integration of Cloud Auth and cloud identity stores, such as Azure AD and Google Workspace, Aruba Central can provide user and client access policy on any managed network with no extra hardware or on-prem authentication server. Students will also learn more about the Aruba Central API options and capabilities.
